

Work Zone Data Exchange Lessons Learned for NC-BPAID

Molly Behan, Mark Mockett, Skylar Knickerbocker

What is WZDx?

A simple specification for communicating work zone information

```
{
  "road_event_feed_info": {

        "vehicle_impact": "all-lanes-open",

```

What is WZDx?

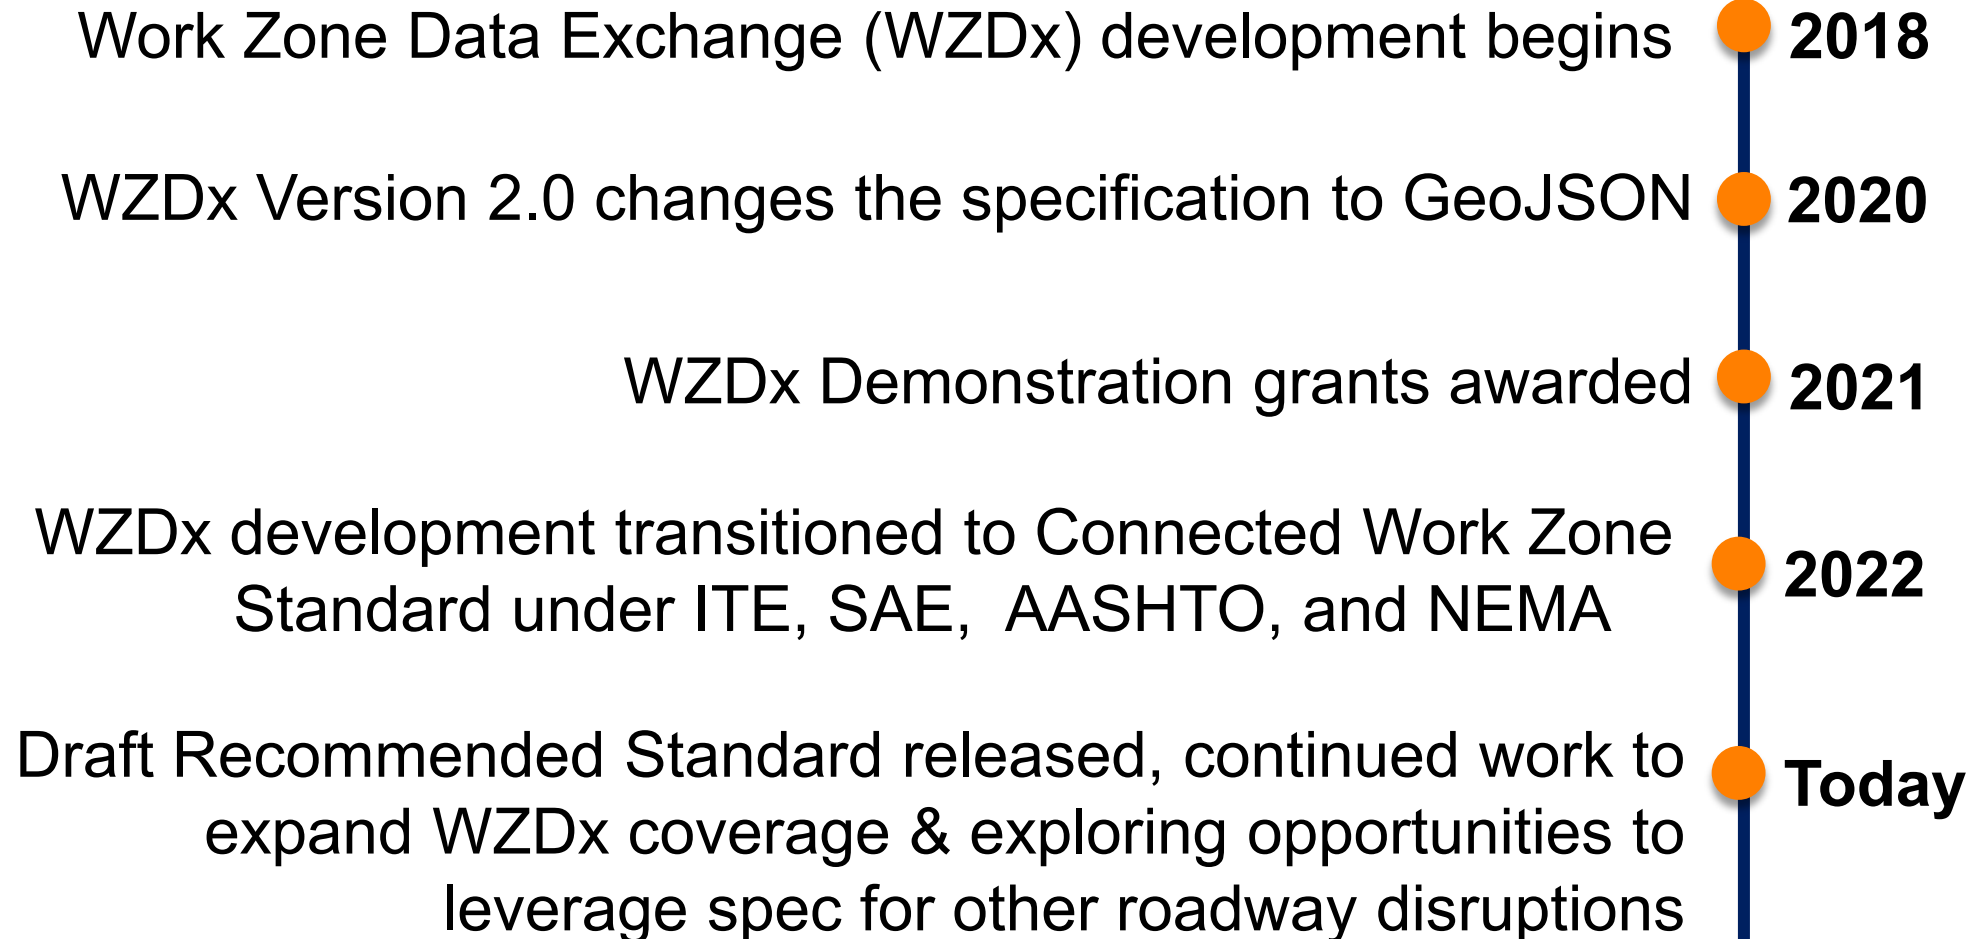

Data feed specifications for work zones and devices

| Feed | Device Feed | Work Zone Feed |
|---------------|--|--|
| Features | Devices | Road Events |
| Feature types | Arrow boards, cameras, dynamic message signs, flashing beacons, hybrid signs, location markers, traffic sensors, traffic signals | Work zones and detours |
| Producer | Work zone equipment manufacturers or vendors. | Transportation Authorities like Tribal, Local, County, State, or Federal Agencies. |
| Consumer | Transportation agencies. Mapping & Navigation companies and CAVs may also be interested. | Traveling public via third parties such as mapping and navigation applications and CAVs. |

What is WZDx?

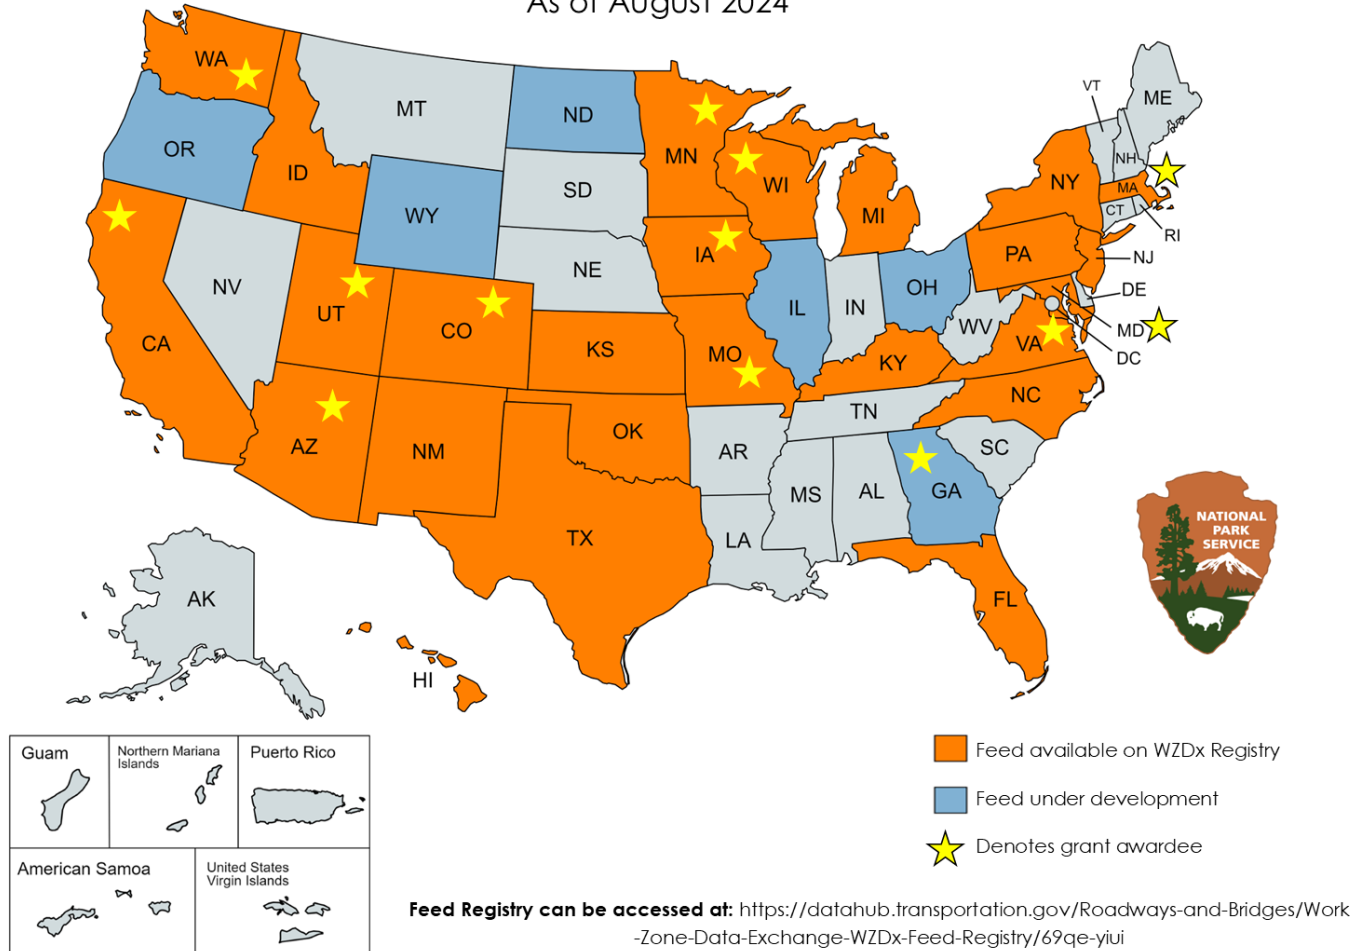

Project timeline

What is WZDx?

Current deployment of Work Zone Feeds

As of August 2024

WZDx Statistics

375+

Working Group
Membership

25

Active Feeds

185

Unique Organizations

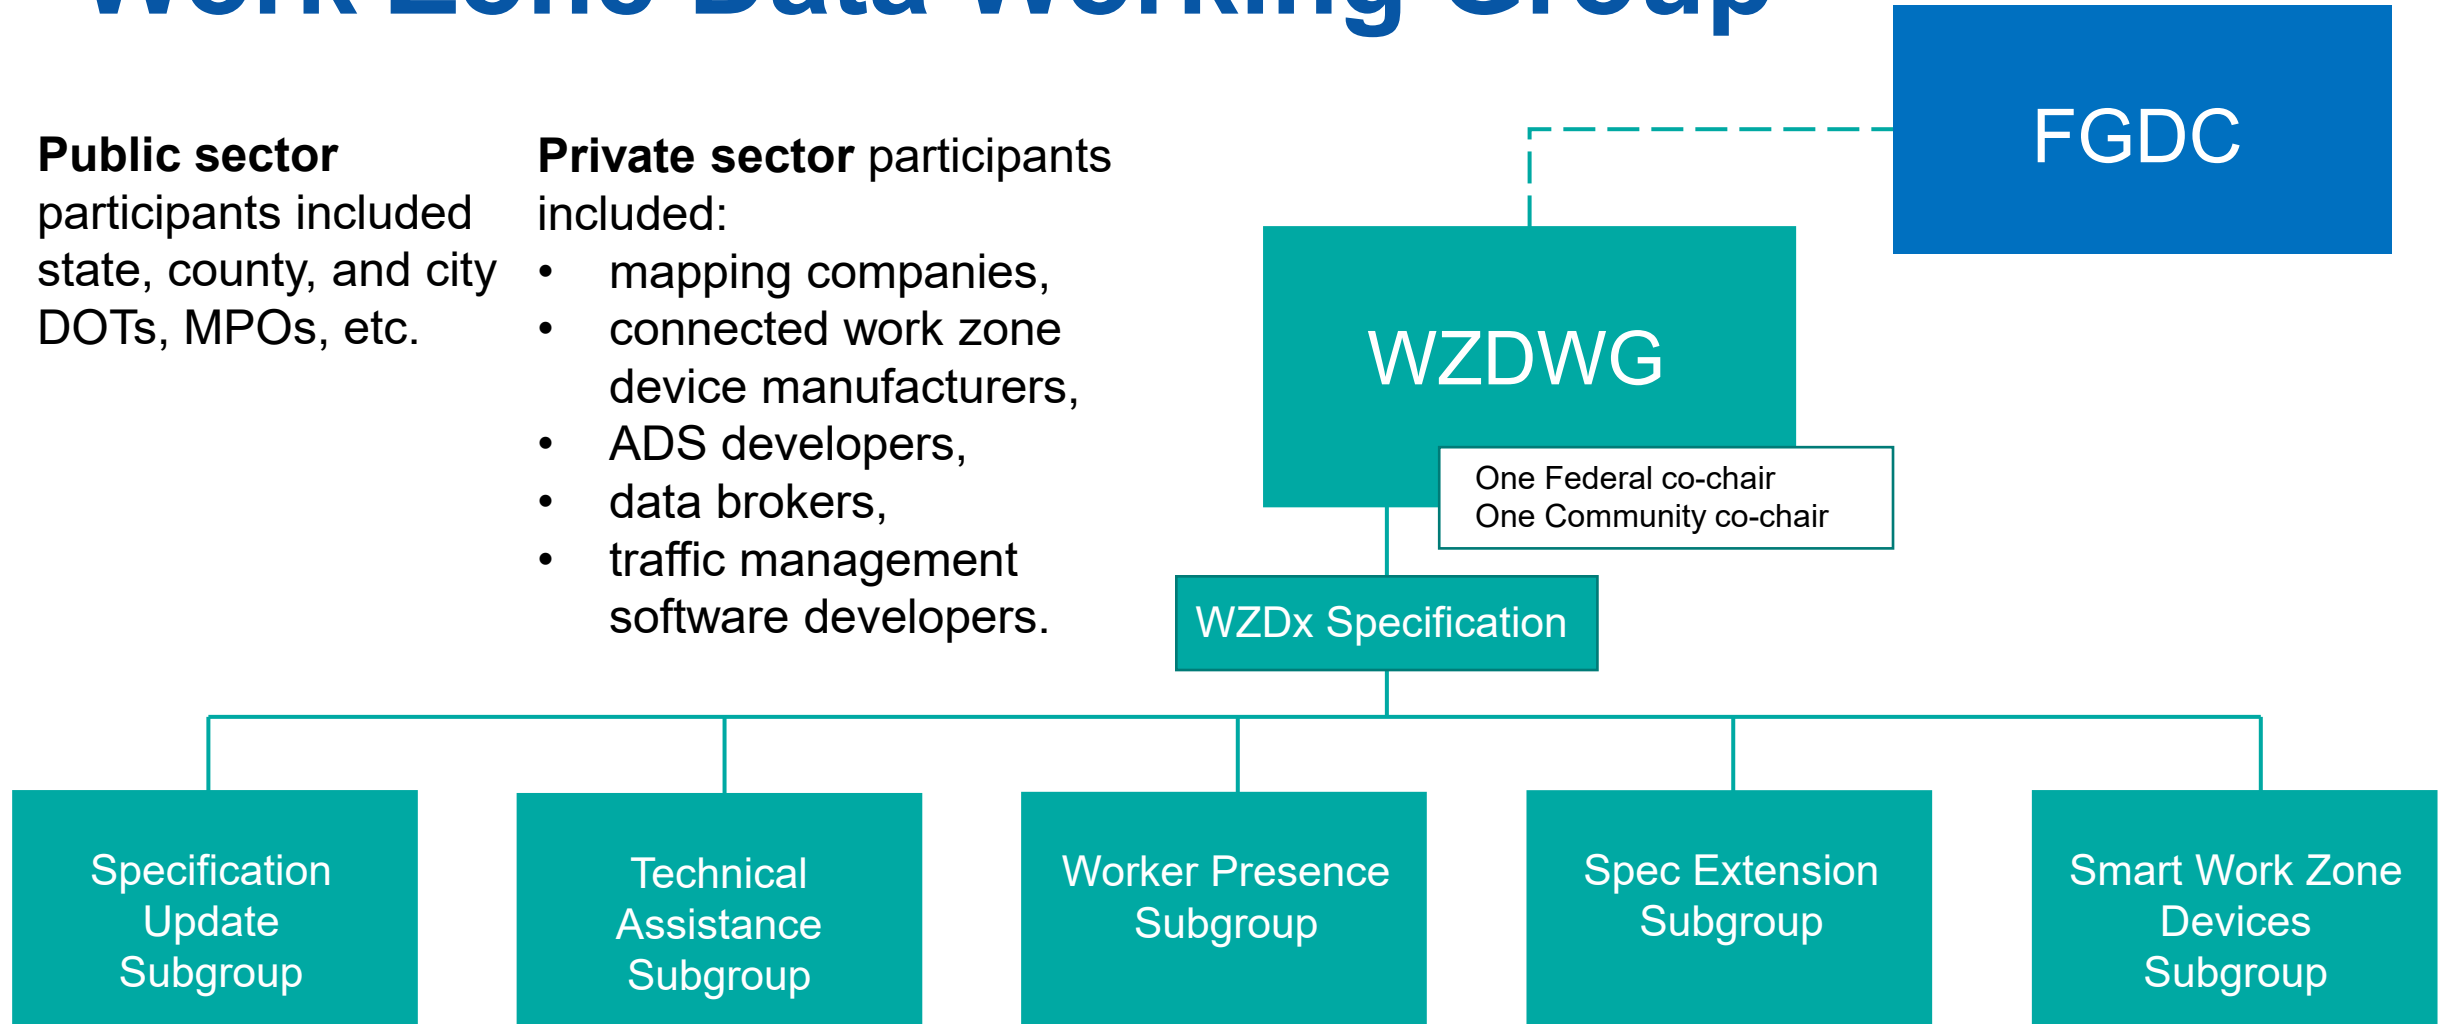

Work Zone Data Working Group

Public sector

participants included state, county, and city DOTs, MPOs, etc.

Private sector participants included:

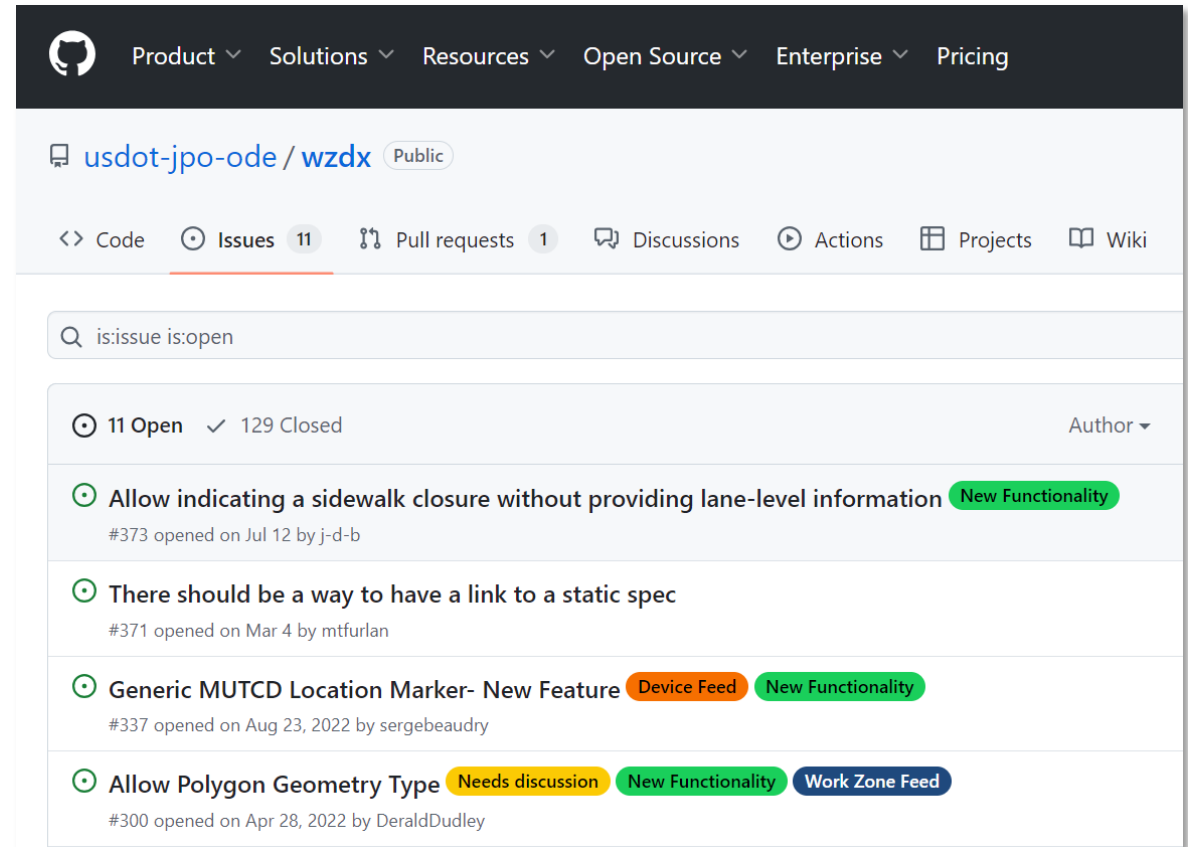

- mapping companies,
- connected work zone device manufacturers,
- ADS developers,
- data brokers,
- traffic management software developers.

Work Process

Collaboration and roles

- Work was conducted in **6–8-month development “sprints”**, each resulting in a major or minor specification release
- **Co-chairs led** and largely executed each group’s work
- **Meetings:** co-chairs met bi-weekly and led monthly subgroup meetings with the larger community
- ITS JPO funded Volpe and BAH to provide support and logistics to the working groups

GitHub site was hub for all things WZDWG – for creating items to work on, collaborating on spec changes, and sharing meeting materials.

Work Process

Sample Development timeline from WZDx v4.1

| Activity | Subgroup Meetings | Deadline |
|---|---|--|
| Start-up – Introductions, charter review, backlog grooming | January 27 | N/A |
| Review and Prioritize Issues | January 27 February 23 April 4 May 5 | Cut off for new issues: before <i>early May</i> meeting |
| Modify Specification Through PRs | April 4 May 5 June 7 | All PRs finished: June 3 |
| Review and Finalize Next Version | <i>Mid-June (if needed)</i> | All PRs through QA/QC: July 1 |
| Present and Vote on Changes | July 25 (WZDWG) | Voting period: July 26 – August 8 |
| Release New Version of Specification | | Specification released: End of August |

Development Questions

- Versions & iteration timeline –
 - What is the right development pace?
 - Should there be more of a break between development cycles?
- When is the specification complete and the working group done?
- Is this a perpetual group or do we just build version one?
 - If not perpetual, where does the spec live “after”?
- Who takes responsibility for validating compliance and accuracy?
